

Electricity North West's charges

- Whichever energy supplier you choose to pay your electricity bill to, about 16%-20% goes to Electricity North West.
- Last year this worked out at about **£87 from the average annual household electricity bill**, compared to a GB average of £93.
- We have a range of investors, mainly pension funds, who pay money up front to invest in the network, and reclaim that money over a long period through electricity bills
- The graphic to the right shows what Electricity North West currently spends that money on.
